FABRICS

EVOTEXX

This stretchable polyester fabric assures maximum comfort and a great range of movement. The stretchable, Smart fabric membrane guarantees high-performance, in addition to providing waterproof and breathability functions.

Look and feel your best on the slopes with breathable, durable and wind-proof garments made for extreme weather conditions.

EvoTexx's features make it ideal for snowy or rainy days, as well as for end-of-season warmer days.

EVOTEXX 3L

This fabric consists of three layers: an external polyester layer, an internal water-resistant laminated membrane and an internal layer. The lamination assures a water resistance of 20.000 mm water column and at the same time keeps breathability of 20.000 g/m²/24h, making it possible to produce technical garments suitable for even the worst conditions.

thermoflexx

This thin, lightweight padding offers excellent thermal insulation with technical and waterproof materials. This microfiber padding is soft, warm, and is extremely durable in harsh weather conditions, as well as in the wash.

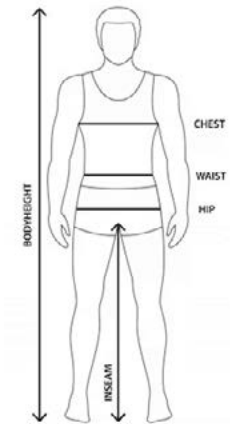

Thermoflexx is a slimming, lightweight material that also offers a high heat insulation. Additionally, thermo ball wadding products are soft to the touch, comfortable to wear and allow freedom of movement.
